

# GIVING LIFE BACK TO PATIENTS

*Michigan Vascular Mobility Center Provides Complete Care*

“L

ive for what tomorrow can bring, not for what yesterday took away.”

Patients will find this message handwritten on a whiteboard in the Michigan Vascular Mobility Center – a message that identifies the purpose, focus and values the seven-year-old center lives by.

Flint resident Tom Brannon knows well what he left behind and how much better life is for him, thanks to the mobility center. He is grateful every day for the people “who saved my life,” he says.

Brannon was in a car accident several years ago. After years of trying to save his leg, vascular surgeons exhausted all options. His leg had to be removed. Not only did he lose his leg, but he also lost his chain of party stores.

“I was a real mess. I contemplated suicide,” he admits. “I thought life was over for me until one of the vascular surgeons from Michigan Vascular Center told me about their newly opened mobility center. I think I was one of the first patients.”

He describes the team as a “great group of people. Their first and only concern is the patient; they wouldn’t let any insurance delays slow down their work.”

Brannon recently purchased American Shuttle, a transportation service based in Grand Blanc that takes people with handicaps to appointments and other places in the Genesee County area.

“I’m a handicapped person helping handicapped people,” he says with enthusiasm and pride. “Finding the Michigan Vascular Mobility Center has been a life changer for me. And people

don’t even know that I have a prosthetic leg. I don’t limp at all. There is life after a prosthetic leg, and I thank Michigan Vascular Mobility Center for giving me this great life I lead today.”

The Michigan Vascular Center team, striving to provide the best patient outcomes possible, wanted to ensure patients received complete continuity of care for a lifetime. The missing piece? A mobility center.

Following surgery, patients were seeking prosthetic care elsewhere. The vascular surgeons wanted their patients to have the best opportunity to lead the life they wanted and deserved, and they felt continuity of care for a lifetime by the same medical team was critical. That is why it made sense to open the Michigan Vascular Mobility Center within the physician offices.

According to Ken Eick, certified prosthetist and director of Michigan Vascular Mobility Center, “The surgeons here not only conduct the most advanced procedures to ensure the best functionality possible after an amputation, but their dedication and commitment to patients is second to no one,” he states. “Our number one focus is obtaining the best possible outcome for every patient we see.” That is why Eick is called in at the time of patient diagnosis and works with patients through every step of the process – from prehospitalization to post-hospital care and for the rest of the patient’s life. This early and continued involvement gives patients a sense of comfort and security at a very difficult time.

Eick himself completes all casting and prosthetic design in the on-site lab, which also reduces time delays. Also, if a patient has

“

WE ASK PATIENTS, ‘WHAT DO YOU  
WANT TO DO?’ NOT JUST ‘HOW ARE  
YOU FEELING?’

”

– KEN EICK –

a question for a vascular surgeon, a member of the team will stop in during that visit. The immediate and constant teamwork is possible only with this patient care model, Eick finds. We ask patients, ‘What do you want to do?’ not just ‘How are you feeling?’ They may say, ‘I want to work in my garden, again,’ or ‘I want to hunt, again.’ Our goal is to give that life back to our patients. “We always are asking ourselves, ‘What is best for this patient? What will give patients the highest outcome?’”

Eick is highly respected in the field and has participated in national advisory boards for manufacturers as well as beta testing of new products. He also serves as a guest lecturer at several physical therapy programs and provides physician education on prosthetics.

The center’s impact isn’t limited to Michigan. Michigan Vascular Mobility Center partners with the nationwide organization Amputee Associates and the Tennessee-based Amputee Blade Runners. (Learn more about these affiliations at [beonthetown.com](http://beonthetown.com).)

The Michigan Vascular Mobility Center is housed inside Michigan Vascular Center, located at G-5020 W. Bristol Road in Flint. The vascular center also has offices in Lapeer and Saginaw for patient convenience.
